

Garmin Canada Inc. Product End-of-Life Policy

Garmin Canada's management of a product's lifecycle is driven by the manufacturability and business viability of each product. In general, Garmin Canada will continue to manufacture and sell a product if:

- There is demand in the market and a viable business exists for the product
- The manufacturing process is still available
- The components required for the product or suitable replacements are available

Should any of the above not be true, a product is subject to discontinuance.

Garmin Canada has considered the industry JEDEC standard J-STD-048 in determining its EOL policy. Should a product be discontinued:

- Garmin Canada will issue a Notice of Discontinuance 6 months prior to the last order or LAST Time Buy (LTB) date**.
- The notice of discontinuance is issued 12 months prior to the final ship date**.
- Notices of discontinuance will be posted online, and will be expected to cascade through Garmin Canada distribution channels.

In the event of a product discontinuance, where possible, Garmin Canada will recommend a replacement product or migration paths for customers wishing to continue with a similar product to that which has been discontinued.

In the event of a component part replacement in a product, Garmin Canada will issue a Product Change Notice (PCN), which will reference the product in question, and migration paths and methods, and version discontinuance notices in line with the EOL policy where necessary.

**Garmin Canada reserves the right to issue shorter-term notices of discontinuance and last time buy and final shipment dates due to factors beyond their control (e.g., component availability, manufacturing capability/availability, or other supplier constraints beyond Garmin Canada's direct control).
